## **Preco Introduces Alternative Laser Processing Technique for Microwave and Frozen Food Packaging**

(Somerset, WI) Preco's new AcuVent™ laser technology produces controlled-depth scoring or cut-through slits. These scores or slits can be registered any place on the film. AcuVent is reliable, convenient and cost effective for microwave venting.

AcuVent offers busy consumers an easy, quick way to prepare sealed frozen and refrigerated foods. When film-covered food packages or bags processed with AcuVent are placed in the microwave, the steam generated from within the package bursts through the scoring and automatically ventilates the package. The AcuVent technology can enhance fresh produce packaging by allowing consumers to steam vegetables in the microwave without removing them from the package.

In addition, Preco's AcuVent laser technology can be adjusted to properly vent air entrapped within frozen food packages for more compact shipping.

Food packaging converters can rely on Preco's contract manufacturing services for laser scoring, perforating or slitting processes in a wide variety of film and sizes.

Preco, Inc. manufactures customized automated processing systems for high speed, precision cutting, perforating, welding and other specialized industrial processing applications. Preco is also one of the largest contract manufacturing service providers in North America.
